

IN THE ABSTRACT OF THE DISCLOSURE:

Please amend the abstract to read as follows:

~~The present invention provides a~~ A display device used in a miniaturized portable equipment ~~which is capable of driving two display panels, consisting of main and sub display panels.~~ The display device includes a main display panel, a sub-display panel and a drive circuit. The drive circuit can simultaneously drive the main display panel and the sub-display panel. Output terminals are provided to the main display panel, and signals are transmitted to the sub-display panel from the output terminals. Further, the drive circuit includes a power source circuit which is capable of outputting proper common voltages to the main display panel and the sub-display panel.
